Rafael Guzmán Barranco

Web Developer

Professional profile

Software developer with more than 15 years of experience, collaborating in companies of different fields, distinguishing myself by working on results.

Professional objective

Developing applications that help users make better decisions, in itself, creating software that works for them.

Experience

WEB CONSULTANT - Various companies 2010 - present

Coordinate and execute the design, development and implementation of custom software (*web and mobile*) and databases.

PHP: To develop static and dynamic websites starting from a design in Photoshop, Illustrator, Adobe XD or Figma, I developed from the Front to the Back in conjunction with MySQL.

ReactJs: To develop static and dynamic websites, combining it with Styled-Components to manage the styles in a clean way, simplifying the reading and compression of the components, in the same way passing props to make the component styles dynamic.

NextJs: NextJs: To develop web apps, combining it with Styled-Components or Tailwind and developing APIs for the consumption of the same application.

GatsbyJs: To develop Jamstack sites starting from a design in Photoshop, Illustrator Adobe XD or Figma, combining it with Styled-Components, they have mainly been websites for companies, organizations and/or individuals that do not need to constantly update their website.

React Native: To develop apps for iOS and Android, starting from a design in Photoshop, Illustrator Adobe XD or Figma, consuming REST APIs to list data, graph it, and/or modify it.

Typescript: I have used it to develop apps, where I need to preserve the fidelity of the data, whether within web apps or mobile apps.

FRONT END DEVELOPER - Dynamicore 2021 - 2023

Coordinate and execute the development of interfaces for customer acquisition landing pages and mobile applications with React Native.

ReactJs: To develop landing pages for clients who in turn needed to attract clients to offer credits, which were stored in the main Dynamicore software. The information requested was name, surname, email, loan amount and payment period to carry out the debt calculations. The CSS of these landings was developed with Styled-Components and/or MaterialUI.

React Native: To develop apps for Android, consuming a REST API of Dynamicore's main product to list data, graph it, and/or modify it, in two applications a third-party service was used for digital authentication of the client where their federal ID and a video were used. As proof of life to identify that you are the person you say you are to grant the credit, some projects were developed in Javascript and others in Typescript.

FRONT END DEVELOPER - Nerdy Trust 2018 - 2021

Collaborate in the development of modern web applications on ReactJs, mobile applications with React Native and consumption of API's.

ReactJs: To develop web apps, where Nerdy provided the requirements already worked on to only develop them in the app, some projects were developed in Javascript and others in Typescript, among the most notable apps in which I collaborated were the candy store software of a cinema, where I was developing the sales part where we showed boxes where the products that the client requested were added, with the option of showing a contextual menu for various options, just as for the same cinema I developed the module to design Drag&Drop type cinema rooms where I could add the screen, blocks of seats, aisles and being able to save the progress to continue with the work later.

React Native: To develop apps for Android with Expo, consuming a REST API previously developed by Nerdy to list data, graph it, and/or modify it, mainly for Benq México.

FRONT END DEVELOPER - Armando Gonzáles (Manduks) 2010 - 2018

Collaborate in the development of modern web applications on ReactJs, mobile applications with React Native and consumption of API's.

ReactJs: To develop informative static websites.

NextJs: To develop web apps, combining Tailwind and developing APIs for the consumption of the same application.

FULL STACK DEVELOPER - Mundo Web 2008 - 2011

Collaborate in the development and implementation of custom software and databases.

PHP: To develop static and dynamic websites based on a design in Photoshop, I developed from the Frontend to the Backend in conjunction with MySQL.

C#: To develop desktop apps, using MySQL databases and connecting them to the company's servers to consult or send information.

Education

DEGREE IN COMPUTER SCIENCE 2002 - 2007

Instituto Tecnológico del Valle de Oaxaca Title was obtained
Nazareno Xoxocotlán, Oaxaca

Own projects

Mezcal UI Mezcalui.com 2023

Online platform to sell components developed in ReactJs with Typescript and Tailwind, highlighting animations, through online registration and payment the client will be able to access the source code of the component and instructions on how to implement it in their project, the platform where we assemble the components is developed in NextJs 13 with Typescript, customer information is stored in a MySQL database that is accessed through Prisma and payments are linked to Stripe, the site is updated occasionally since it is not a project main for the two people who collaborate on it.

Brewslab - brewslab.mx (closed project) 2021 - 2023

Online platform to teach courses about Hombrewing at the Latin American level, through online registration and payment to access the course, the topics were in video format and sometimes with attachments related to the topic.
